

Mucosal Deformities Around Implants

Peri-implant mucosal deformities include the absence of keratinised mucosa and the development of mid-buccal mucosal recession, papillary recession and/or discolouration.

Dr Maria Retzepe

DDS, PhD, MSc, CertClinSpec (Perio), FHEA

Maria Retzepe is a registered specialist in periodontics and honorary Clinical Lecturer in Periodontology at the world-renowned UCL Eastman Dental Institute.

Key facts about your speaker include:

- Awarded the most prestigious international awards in dental implantology, the 2009 European Association of Osseointegration Research Award and the 2010 Andre Schroeder Research Prize.
- Gained Certificate of Clinical Specialisation in Periodontics and Master of Science in Oral Biology with distinction from the University of Athens following a 3 year full time specialist training programme.
- Completed a clinical fellowship programme at the Department of Periodontology and Fixed Prosthodontics, University of Bern, Switzerland.
